

Key Breaking Changes

By: Mosh Hamedani

From Beta7 to RC1

Packages

Angular2 package is broken down into a few smaller packages. So, in **package.json**:

```
"@angular2/common": "2.0.0-rc.1",  
"@angular2/compiler": "2.0.0-rc.1",  
"@angular2/core": "2.0.0-rc.1",  
"@angular2/http": "2.0.0-rc.1",  
...
```

Import Statements

In import statements replace **angular2** with **@angular**.

```
import {Component} from '@angular/core';
```

One package that has a slightly different name (in **boot.ts**):

```
import {bootstrap} from '@angular/platform-browser-dynamic';
```

There is a new router implementation under '@angular/router'. The old router is moved to '@angular/router-deprecated'.

NgFor Directive

Replace # with let.

```
<div *ngFor="let post of posts">
```

Custom Pipes

In **transform** method, instead of an array, add parameters explicitly:

```
transform(value: string, limit: number, threshold: number)
```
